

Strategic priorities for the OECI

Quality improvement in Cancer Care and Research

The Accreditation and Designation Programme, specifically designed for cancer centres, aims to constantly improve our cancer centres' outcomes for patients and their experience of care. Although physicians, nurses and researchers constitute the core of cancer care and research, multidisciplinary working, efficient logistics and state of the art, complex infrastructure are needed in order to deliver high quality care to cancer patients. About half of the OECI Members are already included in the A&D Programme, and the present pipeline of applications indicates a steep growth in the programme, extending beyond Europe to centres in Asia and South America. The OECI quality approach is now recognised as the only existing programme specifically designed for cancer centres right across Europe (and certified by the International Society for Quality in Healthcare) providing a significant impact on the quality of cancer care and integration with translational research. The certified centres represent the so-called "OECI Quality Network". Future impact in Europe will include publications of the Programme's experience from ten years of quality assurance and improvement work, policy documents on networks, and establishing core standards for cancer care across the EU.

Patient Involvement and Partnerships

Quality improvement in cancer care and research is a major goal shared by healthcare professionals, researchers and patients. Today, innovative cancer centres are taking initiatives, involving patients and launching collaborations with local and national patient organisations. The OECI Collaborations for Good Practices with Patients (CGPP) Working Group is evaluating, promoting and launching a wide range of projects involving patients and patient organisations. Thanks to a fruitful alliance with the European Cancer Patient Coalition (ECPC), the OECI is supporting cancer centres in their mission to fulfill today's cancer patients' expectations.

Biobanks and Molecular Pathobiology

The OECI Biobanks and Molecular Pathobiology Working Group, together with some of the major European cancer Societies/Organisations, contributes to the continuous evolution of molecular oncology to guarantee the reproducibility of analytical methods. The WG develops specific recommendations for standardisation and validation of biomarkers and molecular analysis other than solid and liquid tissues biobanking for a better reproducible use. In order to accelerate the production of new effective protocols of treatment, a study aiming to a practical adoption of N-trials is under development. The WG collaborates with the OECI Accreditation and Designation Programme for a continuous update of the standards to be adopted. The OECI Pathology Day is the main annual event organised by this WG.

Cancer Outcomes Research

The Cancer Outcomes Research Working Group has been activated in response to the need of following-up prospectively cohorts of patients. For CCCs located in areas covered by population registries, comparative analyses between population and clinical sets of patients will be possible, using EURO CARE and High Resolution data on survival and outcomes.

OECI and rare cancers

OECI is particularly involved in the care of patients suffering from rare cancers. An even higher discrepancy in patient outcomes, depending on where they are treated, is still observed. OECI coordinates the work package on quality of care of the Joint Action on Rare Cancers, recently launched by the Directorate General for Health and Consumer Protection of the European Commission. OECI also acts as associate partner and facilitator of the European Reference Network on rare solid tumours in adults, an impressive network of cancer centres of reference for rare cancers that is partially based on OECI quality standards. The network, coordinated by the Centre Léon Bérard in Lyon, involves several cancer centres from 18 countries, with a large percentage coming from OECI membership.

Supportive and Palliative care

The Supportive and Palliative Care Working Group aims to improve the quality of life of cancer patients and their families, helping them to cope with the illness and live as actively as possible by preventing and treating physical, psychosocial and spiritual suffering. The WG intends to share a common vision of early modern integrated palliative and supportive care. At the same time, it develops appropriate quality indicators and standards for care service in the OECI member institutes and it implements clinical and health service research projects through the OECI network of palliative care units in collaboration with other European networks of palliative care.

Communication and Dissemination

The OECI Communication and Dissemination activities edited by the Liaison Office guarantee the visibility of the OECI initiatives and the participation of the Members and other interested Parties to the main initiatives.

The Liaison Office collaborates with ecanermedicalscience, the official OECI Journal. The digital and printed versions of the OECI Magazine, the Leaflet, the Yearbook and other scientific articles are the main OECI publications, along with the OECI website.

The OECI Board

 President Thierry Philip Paris, France	 Executive Secretary Pending
 Past President Dominique de Valeriola Brussels, Belgium	 Elected Member Simon Oberst Cambridge, United Kingdom

OECI Objectives

The OECI aims to promote efficient partnership, reduce fragmentation and increase competitiveness amongst European cancer centres and institutes.

This goal is being achieved by promoting and enhancing the concept of "comprehensiveness" and "multi-disciplinarity", supporting quality in cancer care and dynamically working in crosscut expertise by involving our Working Groups, our Members and promoting synergies with other cancer Organisations.

The OECI is currently geared towards creating a "network of cancer networks" where primary prevention, screening & early diagnosis, basic, translational & clinical research, collaboration for good practices with patients, biobanks and pathobiology, supportive and palliative care, cancer economics and centralising real-life cancer patient data are included. The above goal is part of the Presidential proposal of an OECI evolution that may better answer to the need to work on a European Cancer Mission within the incoming Framework Programme "Horizon Europe".

The OECI aim is to accelerate the application of multidisciplinary personalised care approaches, to reduce morbidity and to guarantee an equitable access to care to all cancer patients, avoiding the collapse of the National Health Systems all over Europe.

Thierry Philip
OECI President

“ The OECI is a non-governmental, non-profit Organisation founded in Vienna in 1979 and remodeled in 2005 into OECI-EEIG, a European Economic Interest Grouping. Today, the OECI regroups 102 Members, which include some of the most prominent European Comprehensive Cancer Centres. Several major cancer centres from the Chile, Colombia, Jordan, Russian Federation, Tanzania, Turkey, Ukraine and Viet Nam are also members of our Organisation in order to benefit from our Accreditation and Designation Programme ”
