## CCI4EU

Comprehensive Cancer Infrastructure for the European Union

Coordinator: OECI

ESO's Role: Consortium partner and work package leader.

CCI4EU is a coordination and support action geared towards supporting Member States and Associated countries in developing or improving existing or future Comprehensive Cancer Infrastructures by fostering research innovation and digital capacity development in cancer care. A tailored Capacity Building programme has been devised to fulfil the aim of this action: ensuring that 90% of cancer patients are treated in Comprehensive Cancer Infrastructures by 2030.

On this page, all the educational materials will be gathered and will remain available for all interested users.

Funded by the European Union

*This project has received funding from the European Union's Horizon Europe Research and Innovation Programme under grant agreement 101103746 Project CCI4EU. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or European Health and Digital Executive Agency (HADEA). Neither the European Union nor the granting authority can be held responsible for them.*

Taking advantage of ESO's existing online teaching platform, and in close collaboration with WP4 and WP6, a specifically designed section of the e-ESO website was created to facilitate online CB training.

This digital learning infrastructure is accessible to all who are interested, and it offers online material that meets the development needs of each trainee team in relation to the CB of their CCI.

The CCI4EU page of the e-ESO learning platform can be found here:  
<https://www.e-eso.net/pages/cc14eu>

This page contains links to all the educational activities organized by ESO in the frame of the CCI4EU project to date.
