The BENCH-CAN project aims at linking 12 cancer centres in 10 EU Member States as well as the European Cancer Patients Coalition for improving cancer care and ensure long term benefits to the patients. By concentrating on benchmarking operations management and best clinical practices, BENCH-CAN provides a critical mass for tackling large scale problems. Improving the oncologic care infrastructure towards state of the art comprehensive care provision, contributes to patients’ wellbeing, economic productivity and ensures a better organization and management of the cancer care infrastructure.

BenchCan objectives

The general objectives of BENCH-CAN is to benchmark comprehensive cancer care & yield best practice examples in a way that contributes to improving the quality of interdisciplinary patient treatment. To achieve these goals, the project addresses 6 specific objectives:

1. To collect, compare and align, by consensus formation, the standards, recommendations and accreditation criteria of comprehensive cancer care adopted in selected European countries representatives of different geographic areas.
2. To review and refine a benchmarking tool that can be applied to comprehensive cancer care through interdisciplinary patient treatment.
3. To pilot the benchmark tool with particular attention to operations management and best clinical practices.
4. To promote knowledge exchange and sharing of best practices among providers of comprehensive cancer care in European countries and regions.
5. To ensure compatibility of the benchmarking tool with existing cancer care resources and management frameworks.
6. To ensure the sustainability and long-term benefits of the project.

BenchCan work plan

Evaluation

Collection of information about activities, meeting expectations & outcomes to inform judgments about project performance, strategies, work quality, cost efficiency & decisions about future work.

Benchmark tools piloting

The tools will be piloted in 3 geographic EU clusters. Each cluster conducts a benchmarking (BM) exercise and it is visited by an external review group. These clusters have been identified as: West/North (Berlin, Helsinki, London, Heidelberg), South (Barcelona, Porto, Bari, Milan, Central & Eastern Poznan, Vilnius, Budapest, Cluj). In addition to the 3 geographic clusters, the subjects are assessed in three development categories: full, medium and promising (data collection pilot sites will have 2 parts: i) description of pilot site organization, with an agreed number of indicator sets, describing the comprehensive care context ii) modeling performance of comprehensive cancer centres or cancer departments/units at general hospitals by several matrices e.g. organizational objectives/intermediaries (staff/teams/services); services/services/patient outcome enablers; translational research or medicine-related data. One way to improve benchmarking efforts is an analytical technique called “data envelopment analysis” (DEA), which performs complex mathematical optimization of inputs (resources consumed) and outputs of healthcare production processes to facilitate comparison of one organization to others making adjustments for scale.

Budget impact analysis

The benchmarking tool foresees a detailed budget impact analysis. It is focused on benchmarking the financial performance and operational efficiency of comprehensive cancer centres and cancer departments/units at general hospitals.

Benchmarking manual

The manual is addressed to the care categories engaged in comprehensive cancer care through interdisciplinary treatment of patients (clinical staff, management, patients/carers and service funders).

BenchCan strategic impact

The number of new cancer patients is steadily increasing. All aspects of quality in cancer care, defined by IOM (effectiveness, efficiency, patient-centeredness, equity and safety) have to be taken into consideration. Differences in health systems performances in EU countries, indicate that there is sufficient room for improvement, contributing to a larger degree of disease & symptom free survival after primary treatment & prolonged symptom free metastatic disease. Having a sufficiently developed comprehensive cancer infrastructure (in which comprehensiveness relates to (i) number of disciplines of technological infrastructure (ii) to the translational research & medicine infrastructure) provides a fertile environment for R&D of various biomedical technologies. Improving oncologic care infrastructure towards state of the art comprehensive care provision, will contribute to reduce the shifting of R&D activities outside Europe, attracting pharmaceutical companies to invest in Europe. Linking benchmarking, especially embedded in existing European organizations such as the OECD (the only existing European Network of CO&Ds is an optimal prerequisite for a successful benchmarking system that can help EU cancer care providers to improve infrastructure & function. The project also looks to possible added value by initial attention to how the benchmarking system can be used across clinical specialists focusing on the patient holistically. This will become more critical as compression of co morbidity increases with ageing populations.

European Cancer Patients Coalition (ECP) - Brussels, Belgium

National Centre for Tumour Diseases (NCT) - Heidelberg, Germany

Institut Català de Oncologia (ICO) - Acting as Pilot Site - Barcelona, Spain

Institute of Oncology - Vilnius, Lithuania

Institut Tumori “Giovanni Paolo II” - Acting as Pilot Site - Bari, Italy

The Greater Poland Cancer Centre Hospital - Acting as Pilot Site - Poznan, Poland

Herlev University Central Hospital - Acting as Pilot Site - Copenhagen, Denmark

King’s Health Partners Integrated Cancer Centre - Acting as Pilot Site - London, UK

Charité Comprehensive Cancer Centre - Acting as Pilot Site - Berlin, Germany

Instituto Portugueses de Oncologia do Porto Felippeertil - Acting as Pilot Site - Porto, Portugal

Fondazione Istituto Nazionale Tumori - Acting as Pilot Site - Milan, Italy

National Institute of Oncology - Acting as Pilot Site - Budapest, Hungary

Oncology Institute “Prof. Dr. Ion Chiricuta” - Cluj Napoca, Romania
